

MESSAGING SERVICE IN A FEDERATED CONTENT MANAGEMENT SYSTEM

ABSTRACT

A technique for communication between a first computer and a second computer, each of which
5 is connected to a server computer. Under control of a first application at the first computer, a message
is created, wherein the message comprises zero or more text and zero or more content identifiers, and
the message is put into a message queue. Under control of a second application at the second computer,
the message is retrieved from the message queue.
